

Model no. 1765

CHILLER

The right cooling aggregate for every cooling task. Our product range provides a comprehensive selection. The Model Series 1765 can be used to implement cooling capacities from 1.0 kW to 60 kW. Indoors or outdoors installation can be chosen according to the application. Cooling aggregates for use at higher environmental temperatures are also available. The main application area for cooling aggregates of the Model Series 1765 is maintaining the temperature of our test containers at 20°C. The compact design and simple operation of our add-on refrigerators make them highly suitable for other applications. The Model Series 1765 can cope with any cooling task and its high accuracy ensures quality.

Installation in buildings, environmental temperature +5°C to +42°C													
Cooling capacity 1) [kW]	1,0	1,5	2,3	3,3	4,5	7,5	9,5	15	20	26	40	50	60
Condenser, air-cooled								✓					
Cooling agent:													
IW 2)							✓						
Direct 3) (without tank)													
Voltage						230/400V 50/60Hz							
UL/CSA-Konformität							Special voltages on request						

1) The cooling power pertains to 35°C environmental water temperature and 20°C flow temperature

2) IW = Industrial water

3) Direct = Direct evaporation without cooling agent
