FORCED AIR OVEN

According to

ISO 2505

The forced air oven is used to condition samples according to the dimensional change of pipes and as a drying oven (e.g. for determining the degree of crosslinking, water absorption, etc.).

SIMPLE AND SAFE OPERATION

> Operating convenience thanks to LCD display and membrane keypad

RELIABLE TEST RESULTS

- > High temperature accuracy: temporal $\pm 0.1^\circ\text{C}$, spatial – subject to operating temperature
- > Uniform temperature distribution in usable space

LASTING EFFICIENCY

- > Test chamber made from high-quality stainless steel
- > High-quality oven insulation and insulated doors for minimum energy loss

STATE-OF-THE-ART TECHNOLOGY

- > Self-diagnosis system for troubleshooting
- > Calibration option directly on the temperature controller for three, freely-selectable temperature values
- > Program sequence saved in the event of a power failure
- > Adjustable admixing of preheated fresh air, regulated by damper control in 10% increments
